Applicant: Kim et al.

Application No.: 10/077,565

Claim Listing:

1. (Previously Presented) A user equipment (UE) including a transmitter

for transmitting a data field of symbols, the transmitter comprising:

a first and second antenna for transmitting said data field of symbols,

wherein said data field includes a first data field;

an encoder for encoding said data field producing a second data field having

complex conjugates of the symbols of said data field; and

a first and second spreading device for spreading said first and second data

fields, wherein said first spreading device spreads said first data field using a first

channelization code and said second spreading device spreads said second data field

using a second channelization code, each channelization code being uniquely

associated with one of said first and second antennas.

2. (Original) The UE of claim 1 wherein said transmitter further

comprises a first and second scrambling device for scrambling said first and second

spread data fields by a single scrambling code associated with said transmitter.

3. (Original) The UE of claim 2 wherein the symbols of said first data

field of symbols are grouped into a first and second sub-data field.

- 2 -

Applicant: Kim et al. Application No.: 10/077,565

4. (Original) The UE of claim 3, wherein the symbols of said second data

field of symbols are grouped into a third and fourth sub-data field, said third

sub-data field being the negative complex conjugate of said second sub-data field

and said fourth sub-data field being the complex conjugate of said first sub-data

field.

5. (Previously Presented) A user equipment (UE) including a transmitter

comprising a transmitter including:

a first and second means for transmitting a data field of symbols including a

first data field;

a means for encoding said data field producing a second data field having

complex conjugates of the symbols of said first data field; and

a first and second spreading means for spreading said first and second data

fields, wherein said first spreading means spreads said first data field using a first

channelization code and said second spreading means spreads said second data field

using a second channelization code, each channelization code being uniquely

associated with one of said first and second transmitting means.

- 3 -

Applicant: Kim et al. Application No.: 10/077,565

6. (Original) The UE of claim 5 wherein said transmitter further

comprises a means for scrambling said first and second spread data fields by a

scrambling code associated with said transmitting means.

7. (Original) The UE of claim 6 wherein the symbols of said first data

field of symbols are grouped into a first and second sub-data field.

8. (Original) The UE of claim 7, wherein the symbols of said second data

field of symbols are grouped into a third and fourth sub-data field, wherein said

third sub-data field is the negative complex conjugate of said second sub-data field

and said fourth sub-data field is the complex conjugate of said first sub-data field.

9. (Original) A user equipment (UE) including a transmitter for

transmitting a data field of symbols, the transmitter comprising:

a first and second antenna for transmitting said data field of symbols; and

a first and second spreading device for spreading said data field, wherein said

first spreading device spreads said data field using a first channelization code,

producing a first spread data field, and said second spreading device spreads said

data field using a second channelization code, producing a second spread data field,

- 4 -

Applicant: Kim et al.

Application No.: 10/077,565

each channelization code being uniquely associated with one of said first and second

antennas.

10. (Original) The UE of claim 9 further comprising a first and second

scrambling device for scrambling said first and second spread data fields by a single

scrambling code associated with said transmitter.

11. (Original) A user equipment (UE) including a transmitter comprising:

a first and second means for transmitting a data field of symbols; and

a first and second spreading means for spreading said data field, wherein

said first spreading means spreads said data field using a first channelization code

producing a first spread data field and said second spreading means spreads said

second data field using a second channelization code producing a second spread

data field, each channelization code being uniquely associated with one of said first

and second transmitting means.

12. (Original) The UE of claim 11 further comprising a means for

scrambling said first and second spread data fields by a scrambling code associated

with said transmitting means.

- 5 -
